1 **PRELIMINARY REPORT OF TEMPORARY RECEIVER**

2 **I.**

3 **Introduction**

4 On October 22, 2012, this Court entered a Temporary Restraining Order with an
5 Asset Freeze and Appointment of Receiver (“TRO”) which appointed me, Thomas W.
6 McNamara, Temporary Receiver (“Receiver”), for the business activities of Receivership
7 Defendants.

8 Receivership Defendants are defined in the TRO (Paragraph H, page 4) as the
9 entities named as Corporate Defendants (Ambrosia Web Design LLC d/b/a AWD,
10 Concord Financial Advisors LLC, CAM Services Direct LLC, AFB LLC, and Western
11 GPS LLC) and “any affiliates and subsidiaries that conducted any business related to the
12 Corporate Defendants’ credit card interest rate reduction services and that the Temporary
13 Receiver has reason to believe are owned or controlled in whole or in part by any of the
14 Defendants.” I have identified one additional Receivership Defendant not named in the
15 Complaint which falls within this extended definition – Max Direct LLC, formed and
16 owned by Defendant Chris Ambrosia.

17 I submit this Preliminary Report to advise the Court of my initial actions and
18 document my preliminary observations. In short, we have taken possession of the one
19 Receivership Defendant currently in business – Western GPS LLC (“Western GPS”) – and
20 have suspended its operations consistent with the terms of the TRO.

21 Western GPS, owned by Defendant LeRoy Castine (“Castine”), operates a
22 telephone sales boiler room selling credit card interest rate reduction assistance to
23 consumers driven to its Tempe phone room by high volume robocalls orchestrated by
24 third-party vendors. The business is at once unlawful and unprofitable. Unlawful at the
25 threshold because the source of incoming consumer calls are illegal robocalls. Unlawful in
26 implementation as some of the techniques deployed to “sell” consumers cross the line into
27 deception and violate the Federal Trade Commission (“FTC”) Act and the FTC’s
28 Telemarketing Sales Rules (“TSR”). It does appear, however, that some consumers did

1 receive some assistance with their credit card situations and that Castine had initiated some
2 efforts to improve operations, training, and compliance. These changes do not, however,
3 in my view, alter the fundamental illegality of the operation.

4 Western GPS's operations are also currently unprofitable with revenues from the
5 Tempe "room" falling short of related expenses. Losses have been offset somewhat by a
6 side business, also unlawful as a form of bank fraud, of "selling" access to Western GPS's
7 merchant account to other telemarketers, each with their own universe of questionable
8 practices, who could not qualify for their own merchant accounts. Losses have also been
9 reduced nominally by revenue from various fulfillment services provided to other interest
10 rate reduction telemarketers.

11 Section XX of the TRO specifically directs that I report to the Court on five specific
12 topics prior to the date set for the hearing to Show Cause regarding the Preliminary
13 Injunction. As to those topics, I can report as follows:

14 (1) **Steps taken by the Temporary Receiver to implement the terms of this**
15 **Order.** I have indefinitely suspended operations at the East Baseline Street site. The
16 practices prohibited by the TRO are so ingrained in the operations that this is the only
17 feasible vehicle for immediate implementation. A fundamental go-forward challenge for
18 this receivership is whether this temporary suspension of operations must evolve into a
19 wind down. For this business to be a lawful business compliant with the TRO and any
20 follow-up Preliminary Injunction, it must adopt a business model free of robocalls,
21 deceptive and illegal practices, and unauthorized merchant account sharing. At this early
22 juncture, it appears that such paradigm shifts would be nearly impossible to implement,
23 would require new capital, and would render the business even more unprofitable.

24 (2)-(3) **The assets and liabilities of Receivership Defendants.** Based on financial
25 records found on site, we have been able to construct a rough profit and loss profile which
26 indicates that this business is not presently profitable and that it has few assets beyond the
27 funds frozen in bank and merchant accounts. (See Section II(B) below. We do not yet
28

1 have a calculation for overall liabilities, but estimate that liabilities are not substantial. *See*
2 further discussion at Sections II(B) and IV(E)).

3 (4) **Steps Temporary Receiver intends to take in the future to prevent any**
4 **diminution in Receivership Defendants' assets, pursue receivership assets from third**
5 **parties, and adjust Receivership Defendants' liabilities.** Implementation of the asset
6 freeze is my primary immediate vehicle to protect assets. Whether or not third parties have
7 assets which can be claimed by the receivership, or Defendants' liabilities can be adjusted,
8 are matters which will require further investigation.

9 (5) **Other matters the Temporary Receiver believes should be brought to**
10 **the Court's attention.** These matters are set forth below in this Preliminary Report.

11 II.

12 Receivership Activities

13 A. Receivership Defendants' Sites

14 My team secured the Receivership Defendant premises identified in the TRO – 123
15 East Baseline Street in Tempe – commencing at 10:00 a.m. on Wednesday October 24,
16 2012. We coordinated our initial efforts with uniformed police from the Tempe Police
17 Department. Once we secured the premises, we provided access to the FTC pursuant to
18 the TRO. The locks on all four entry doors were changed.

19 Western GPS is the only Receivership Defendant presently conducting business at
20 this site. It operates from four contiguous suites (D204, D206, D207, D208). The only
21 identifiable signage is an “AFB LLC” sign on the entry door to Suite D208. We have
22 found no evidence of any other operating sites for Western GPS or any other Receivership
23 Defendant.

24 Upon our arrival, the offices were occupied by 37 staff – 20 “Qualifiers” who field
25 consumer calls generated by robocalls with automated messages; three “Closers;” five
26 “Financial Advisors;” six customer service personnel; two accounting and administrative
27 staff; and Castine, the on-site proprietor and owner of Western GPS. The overall space is
28 approximately 4,000 square feet with monthly rental at \$6,900. The 24 cubicles for the

1 Qualifiers (4 of which were unoccupied when we arrived) are each equipped with a
2 telephone and the cubicles and desks for all other staff are equipped with computers and
3 telephones. Castine has a designated office.

4 An inventory of furniture and equipment on site and a rough schematic of the
5 premises are at Appendix, Exhibit 1.

6 **B. Financial Accounts of Receivership Defendants**

7 Beginning October 24, 2012, my team, and FTC staff, served the TRO on banks,
8 including merchant account operators, where Receivership Defendants were known to
9 have accounts. The following accounts with positive balances have been frozen:¹

Account Holder	Financial Institution	Account No. Ending	Amount Frozen
CAM Services Direct LLC	Global Payments	8962	\$112,479.45
Western GPS LLC	BBVA Compass Bank	2924	\$160,498.39
Western GPS LLC	BBVA Compass Bank	6707	\$20,893.82
Western GPS LLC	BBVA Compass Bank	2819	\$6,748.98
Western GPS LLC	Global Payments	2429	\$758,352.82
Western GPS LLC	Global Payments	3156	\$75,258.27
Lee Castine d/b/a Western GPS LLC	Global Payments	9917	\$26,169.56
Max Direct LLC	BBVA Compass Bank	6741	\$6,468.51
Max Direct LLC	BBVA Compass Bank	4094	\$63,039.43
	TOTAL		\$1,229,909.23

22 Other than the money in these accounts, Receivership Defendants do not appear to
23 have substantial other liquid assets, but our investigation as to assets is still in its

24 ¹ We did learn of one attempt to violate the asset freeze. BBVA Compass Bank
25 reported to us that on the afternoon of Wednesday, October 24, 2012, Defendant Chris
26 Ambrosia, just after being served with the TRO notifying him of the TRO and asset freeze,
27 entered a local BBVA Compass branch and attempted to set up a wire transfer from one or
28 two accounts in the name of Max Direct on which Ambrosia is the designated signatory.
Seeing the accounts were frozen, the bank teller contacted a supervisor who confirmed the
assets were frozen and the wires could not take place. When Ambrosia met with me on
Friday, October 26, 2012, he denied vehemently that he attempted to so access the account.

1 preliminary stages. The most significant assets are funds held as reserves in the credit card
2 merchant accounts maintained by Global Payments. These are not traditional bank
3 accounts, but funds held as reserve by the merchant account which processes credit card
4 payments.

5 **C. Cooperation and Interviews**

6 In general, the employees were very cooperative, provided contact information, and
7 departed. The two primary floor managers stayed on-site, met with us and were
8 cooperative and helpful in describing the operations. The office manager met with us on
9 the day of entry, has returned in the days after, and has also been very helpful. Castine
10 also met with us at the time of our entry and then again the following day and has been
11 extremely cooperative, responded to all our questions, and provided requested information.
12 On Friday, October 26, Defendant Chris Ambrosia, who does not appear to have any
13 active role in the current business, accepted our invitation to meet. He met with us for
14 approximately 30 minutes and was generally cooperative.

15 **D. Documents/Information/Electronic Data**

16 Upon taking possession, my team confirmed that all hard copy documents were
17 secure and terminated all access to computers and electronic data. I retained a forensic
18 computer firm – Forentech, based in Phoenix – which supervised the FTC-retained
19 forensic firm in making mirror images of the computers on site. We also provided notice
20 of the TRO to all identified hosts of websites and electronic data.

21 **E. Forensic Accountants**

22 I retained David Birdsell, a CPA and experienced Bankruptcy trustee based in
23 Phoenix, to review the financial activity of Receivership Defendants. The results of his
24 preliminary analysis are presented in Section IV(E) below.

25 **F. Compliance with TRO**

26 Once we secured the premises and completed a basic review of the business, I took
27 immediate steps to insure compliance with the TRO by suspending operations. As noted
28 above, at page 2, lines 13-22, it is likely that this suspension must evolve into a wind down

1 and shut down of the business because it simply cannot be operated lawfully and
2 profitably.

3 I have activated a Receivership website, www.AWDReceiver.com which will serve
4 as a vehicle to communicate with clients and consumers and have taken steps to have
5 Receivership Defendants' websites roll over to this website.

6 III.

7 Receivership Defendants

8 While Western GPS is the only currently active operation at the East Baseline Street
9 site, it appears clear that its business evolved from Receivership Defendant businesses
10 previously operated from the same site.

11 AFB LLC ("AFB")

12 AFB was the first Receivership Defendant to be formed, incorporated in January,
13 2010 by Castine, with offices at the East Baseline Street site. Its name is still displayed on
14 the window of Suite D208. AFB appears to be the initial moniker by which Castine
15 conducted an interest rate reduction telemarketing business from East Baseline. One of
16 AFB's early employees was Defendant Ambrosia who was hired as a "Closer" in late
17 2010. Over time, AFB also served as an administrative arm for Castine-related ventures,
18 handling payroll, customer service, responding to charge-backs, and basic administrative
19 functions. AFB appears to have been active at some level from January, 2010 through the
20 end of 2011.

21 Ambrosia Web Design LLC, also d/b/a AWD ("AWD")

22 AWD was one of three entities formed by Castine and/or Ambrosia in Spring, 2011.
23 The other two – Concord Financial and CAM Services - are described below. AWD was
24 formed by Ambrosia on March 31, 2011. Despite its name, its business did not involve
25 web design in any manner. Our investigation indicates that it was formed for the sole
26 purpose of securing a merchant account that could serve Castine's telemarketing business.
27 Apparently, Ambrosia's credit worthiness was superior to Castine's. AWD ultimately
28 secured a merchant account which then processed card payments for Castine. Invoicing

1 was done under the name of AWD, in many cases with fictional references to web design
2 services. For this, Castine paid Ambrosia a fee of 4% of the revenues flowing through the
3 merchant account. Ambrosia reported to us he received \$5,000 - \$12,000 a month from
4 the merchant account, prompting him to retire from his position as a Closer for AFB.
5 Administration of the AWD merchant account appears to have been handled entirely by
6 Castine and his team. Ambrosia made no effort to supervise or monitor the account
7 activity, including chargebacks. In November, 2011, AWD lost the merchant account
8 which Castine reported to Ambrosia was caused by other Florida-based telemarketers who
9 were also using the AWD merchant account.

10 Concord Financial Advisors LLC (“Concord”)

11 Concord was formed by Castine on March 30, 2011 and operated at some level
12 from the East Baseline site. Our investigation indicates that it provided primarily
13 “fulfillment” services for other interest rate telemarketers, primarily “financial advisors”
14 who communicated with the consumer and their credit card company about interest rate
15 issues, and the mailing of report packets to consumers. Concord was active from
16 approximately March 30, 2011 until November 22, 2011. We found no signs of any
17 current business operations.

18 CAM Services Direct LLC (“CAM Services”)

19 CAM Services was formed by Ambrosia on April 21, 2011. Like AWD, its sole
20 purpose appears to have been to host a merchant account for Castine’s telemarketing
21 business. The CAM Services merchant account appears to have been used by Castine
22 intermittently at various levels until late 2011. That merchant account has a present
23 balance in its reserve account of \$112,000.

24 Max Direct LLC (“Max Direct”)

25 Max Direct LLC was formed by Ambrosia in October, 2011. It does not appear to
26 have operated any actual business, except to serve as the payee recipient of the royalty due
27 from Castine to Ambrosia for setting up the AWD and CAM Services merchant accounts.
28

1 Ambrosia, through Max Direct, also made small loans to Castine in late 2011 and early
2 2012, as to which Western GPS is still making monthly payments.

3 Given that the merchant accounts provided by Ambrosia were crucial to Castine's
4 ability to stay in business and that Max Direct was the entity upon which Ambrosia
5 participated in the business, Max Direct is a "Receivership Defendant" as an entity directly
6 owned and controlled by Ambrosia which "conducted any business related to the
7 Corporate Defendants' credit card interest rate reduction services." (TRO, ¶ H, page 4.)

8 Western GPS LLC ("Western GPS")

9 Western GPS was formed by Castine in February, 2012 and became the new name
10 for his telemarketing business. It was ultimately able to secure more than one merchant
11 account in its own name. It is the only Receivership Defendant currently in operation.
12 Those operations are more fully described below.

13 **IV.**

14 **Summary of Business Operations**

15 The Western GPS business evolved from previous businesses of Castine. By late
16 2011, AWD had lost its merchant account and AWD, Concord, and CAM Services were
17 swimming in customer complaints, formal and informal. In January, 2012, Castine was
18 forced to mothball operations as he had no available merchant account. At that point,
19 Ambrosia (flush with his "royalty" from the merchant account) loaned Castine
20 approximately \$30,000 which was used to tide the business over. In February, 2012,
21 Castine formed Western GPS which became just another name for a familiar business.

22 The FTC's Complaint and TRO application allege multiple specific violations of
23 the FTC Act and the TSR. We have not conducted an audit to confirm the nature and
24 extent of each such violation. Given that the core business is unprofitable and is
25 predicated on two illegal practices – robocalls and unauthorized merchant account
26 factoring – we do not need to navigate to a conclusion on all the allegations raised by the
27 FTC in order to conclude that this business could not operate lawfully and profitably in the
28 context of this receivership.

1 We summarize below the basic components of the business based on our
2 investigation to date.

3 **A. Marketing**

4 Western GPS deployed a one-dimensional marketing strategy – retain third-party
5 vendors to drive in-bound phone traffic to the Tempe call room through robocalls,
6 delivering pre-recorded messages inviting the consumer to press “1” to speak to a
7 representative. Such a use of robocalls is a direct violation of the TSR, 16 C.F.R.
8 § 310.4(b)(1).

9 Western GPS paid dearly for these robocalls. Its primary vendor – City Tech Guys
10 (“City Tech”) – charged \$125 per day “per seat” (defined as an occupied sales/qualifier
11 desk), regardless of actual results. The Tempe room had a capacity for 24 Qualifiers, but
12 has recently been operating with less due to variations by day depending on illness,
13 vacation, and other workplace issues. Over the last several months, Western GPS has paid
14 City Tech approximately \$2,000-\$2,500 per day for robocalls. Payment procedures were
15 unorthodox – daily cash deposits were made to City Tech’s bank account by Western GPS
16 personnel. The primary contact person at City Tech was Mohammed Ullah, with whom
17 Western GPS personnel were in contact each day about the details of call flow, volume,
18 and technical quality.

19 A second vendor – identified to us only as “Charlie” – had also provided robocalls
20 in earlier versions of Castine’s business.

21 These robocalls had two serious defects as a marketing tool – they were illegal at
22 the threshold and they were not very cost effective. The TSR is explicit that robocalls are
23 illegal absent written consent from the consumer. Castine suggested that he relied on the
24 vendors to insure that these incoming calls were “scrubbed” sufficiently to avoid any
25 issues as to the Do Not Call Registry or robocalls. He suggested that incoming calls were
26 linked to various vendors for whom consumers had “checked the box” that they did not
27 object to the sharing of their information. We did not, of course, find any evidence that the
28

1 flood of consumers being sent to the Tempe call room had “consented in writing” to
2 receive robocalls as required by the TSR.²

3 It is difficult to quantify overall call activity because it varied over time subject to
4 multiple variables and we have no hard information about earlier time periods. We can,
5 however, roughly estimate activity in the period immediately up to the time of our entry.
6 Approximately 4,500 calls were coming into the room daily. We do not know how many
7 robocalls were necessary to generate these 4,500 calls, but we suspect the number is huge.
8 The actual conversion rate on those calls was, however, low. On a good day, 20
9 consumers would be transferred to a Closer and the conversion rate from Qualifiers to
10 Closers to Financial Advisors to actual payment was in the range of 40-45% of those
11 transfers. This was the rate identified by Larry Penman, the Qualifiers’ floor manager,
12 who carefully tracked this information daily.

13 We were able to confirm this rough conversion rate by spreadsheets maintained by
14 the office manager. For example, on October 23, 2012, 24 calls were transferred from
15 Qualifiers to a Closer. Of those, Closers sent 20 calls on to the Financial Advisors. Of
16 those 20, ten were actually charged for total revenues of \$8,750. Similar results were
17 achieved on October 18, when 24 calls were transferred from Qualifiers to a Closer with
18 16 of those going on to the Financial Advisors, with six actually being charged for total
19 revenues of \$6,670.

20 Castine also reported to us that he was actively exploring alternative means to drive
21 call volume – primarily targeted leads through Google and other advertising – but had not
22 yet begun implementation.

23

2 In addition, we did find an electronic copy of a complaint filed in late 2011 by the
24 U.S. Department of Justice and the FTC against robocallers on Castine’s smartphone. *See*
25 *United States v. Roy M. Cox, et al.*, Appendix, Exhibit 2. The robocalling complained of
26 in the *Cox* case is strikingly similar to that occurring at Western GPS through its
27 robocalling service providers. Indeed, *Cox* involved robocalling for “credit card interest
28 rate reduction programs,” among others, using the names “Card Services” and “Credit
Services,” much like that which was taking place in this operation. When asked, Castine
did not have a recollection of the complaint but only surmised that he may have gotten it
while tracking a case against another telemarketer on the east coast a few months ago.

1 **B. Sales – Qualifiers, Closers, Financial Advisors**

2 The sales operations of Western GPS was composed of Qualifiers, Closers, and
3 Financial Advisors, all of whom were incentivized to move consumers to the next step and
4 close the deal.

5 Qualifiers, also referred to as “fronters,” worked a basic shift of 10:00 a.m. to
6 7:00 p.m. Qualifiers were paid a nominal hourly wage (in most cases, \$8 per hour), plus
7 incentives for calls transferred to a Closer. A Qualifier’s mission was to successfully
8 transfer a consumer to a Closer. Qualifiers were closely tracked by the floor manager as to
9 calls taken, average time on the phone, transfers to a Closer, and the number of transferred
10 calls that resulted in actual payments to Western GPS. On average, Qualifier’s took 350-
11 425 calls per day with an average duration of 40 seconds to one minute. A good day for a
12 Qualifier, at least in the current time frame, was to transfer 3 calls to a Closer, resulting in
13 1-2 actual sales.

14 Qualifiers operated off simple scripts prepared by management. In general, there
15 was minimal training, except that a new training procedure had just recently been
16 implemented. Turnover was generally high.

17 A Closer’s mission was to confirm the details of the consumer’s credit card
18 situation – balances, minimum payments, past-due history, etc. – and set the pricing (\$595,
19 \$995, \$1,495, or \$1,995) supposedly based on the projected savings, the target being that
20 the new arrangements would save at least 2½ times the charge. Closers also worked off a
21 script and were incentivized based on actual sales. Certain experienced Qualifiers were
22 also permitted to perform Closer functions, if necessary.

23 The current practice appears to be that Closers did not generally process credit card
24 charges for consumers. Actual charging was processed by the office manager after the
25 Financial Advisor confirmed that the consumer had achieved actual savings. We have not
26 conducted an audit to confirm instances when the Closer or other personnel processed
27 charges before any assistance had been provided or was still pending. We have learned,
28

1 however, that current practices were not necessarily reflective of how the business was
2 operated in the past.

3 In response to sales declines, Castine had recently retained an expert telemarketing
4 sales consultant – Miguel Correa – who had been on-site since October 8, 2012. He had
5 been tasked to improve sales, tighten operations, and improve training. Under his
6 direction, scripts had been re-worked and updated, a more orderly training regimen
7 installed, and Qualifiers were evaluated for sales skills. The sales floor manager reported
8 to us that pre-Correa there had been virtually no training. While the retention of Mr.
9 Correa may have reflected a desire to run a better business, it did not necessarily translate
10 to a more lawful business, given that the source of calls remained illegal robocalls. The
11 hiring of Mr. Correa, a sales expert and motivator, also confirms that the business of
12 Western GPS was to sell, not to improve the plight of Americans overburdened with credit
13 card debt.

14 Western GPS did have in place a limited infrastructure to process interest rate
15 reduction assistance and did, in fact, successfully assist some consumers in improving their
16 credit card arrangements. Consumers who cleared the Closer stage were transferred to one
17 of five Financial Advisors (“FAs”) who occupied cubicles in the boiler room. Their job
18 was to secure these consumers the “savings” that had been promised by the Qualifiers and
19 Closers. They pursued two primary tactics: (1) convince the card company to reduce the
20 operative interest rate; (2) apply for new no balance cards to which balances on the old
21 cards could be transferred. Our investigation indicated that the success rate on interest rate
22 reduction was relatively low and that transfers to new cards received most of the focus of
23 the FAs.

24 FAs were also incentivized based on actual consumer payments. Over time, Castine
25 had provided the Tempe FAs to other call rooms as a “fulfillment service.”

26 The FTC Complaint and evidence in support of the TRO allege multiple violations
27 of the FTC Act and the TSR by these sales operatives, including misrepresentation,
28 unauthorized billing, premature billing, false promises, and refusals to give refunds. We

1 have seen evidence of some of these specific practices, but we have not sought to evaluate
2 each of the FTC's allegations specifically. My review does leave no question, however,
3 that this was a sales company with Qualifiers, Closers, and FAs incentivized to sell
4 loosely-described interest rate reduction assistance. Compensation was based on sales, the
5 training focused on closing deals, and the overall environment emphasized sales:

- 6 • The room was decorated with motivational materials from John
7 Wooden's Pyramid of Success to quotes from Gandhi, Arthur
8 Clarke, and Magic Johnson.
- 8 • Whiteboards situated around the office kept track of results by
9 Qualifiers, Closers, and FAs. One very large whiteboard exhorted
10 "Goal 30 Transfers Double Spiffs \$\$. " Appendix, Exhibit 3.
- 10 • Top Qualifier every week gets a \$200 bonus, plus a trophy.
11 Appendix, Exhibit 4.
- 11 • Qualifiers were generally paid \$8 an hour, plus a "potential" for a
12 \$10 spiff for a closed deal. Ten spiffs would bump the effective
13 rate to \$14 an hour. Appendix, Exhibit 5.
- 13 • Qualifiers operated from a management-provided script and
14 rebuttals which had recently been updated after the arrival of sales
15 consultant, Miguel Correa. Appendix, Exhibit 6.
- 14 • Qualifiers were provided a list of the "12 Most Powerful Words in
16 the Sales Language" to help them close consumers. Appendix,
17 Exhibit 7.
- 17 • Qualifiers who failed to meet the minimum target of ten qualified
18 prospects per week could be subject to termination. Appendix,
19 Exhibit 8.
- 19 • Closers had their own "Closing Script" and "Closer Rebuttals."
20 Appendix, Exhibit 9.
- 20 • Castine was exploring the inclusion of corporate gift items with
21 each price point to give the consumer a sense they were getting
22 something tangible. Appendix, Exhibit 10.

23 These represent a sampling of sales materials found at the site. The original FTC
24 submission and its recent supplemental filing include multiple additional examples.

25 C. Customer Service

26 We found two separate customer service operations on-site in Tempe. One group of
27 three processed refunds, complaints, and responded to basic customer service questions
28 from customers of Western GPs and of a limited number of other "rooms" for which

1 Castine had subcontracted to provide customer service. Billing and chargeback questions
2 also came into this group, including questions from consumers who had purchased services
3 from rooms that used the Western GPS merchant account.

4 A second group of three serviced the consumers who had been “closed” by the
5 Tempe room. They input these consumers’ financial data into a program labeled “Zilch”
6 and then printed out a hard copy report titled, “Guide to Personal Savings” which was sent
7 to the consumer. This same service was provided to some other rooms as a fulfillment
8 service.

9 **D. Credit Card Processing/Merchant Account Factoring**

10 Our investigation indicates that variants of merchant account fraud and
11 manipulation have been key components of Castine’s businesses. For telemarketing
12 entrepreneurs, access to a merchant account for credit card payment processing is essential.
13 They perceive merchant accounts as “assets” unto themselves. Opportunistic owners of
14 these accounts make them available, for a fee, to members of the telemarketing fraternity
15 who cannot secure them because of their bad credit, prior chargeback history, or because
16 the industry is pre-disposed against merchant accounts for telemarketers in general.
17 Defendant Castine played both sides of this scenario – as needed, he has piggy-backed the
18 merchant accounts of other telemarketers; and once Western GPS secured its own
19 merchant account, he has allowed others, for a fee, to process their charges through the
20 Western GPS account.

21 This practice has been labeled “factoring” of merchant accounts. It is a form of
22 bank fraud and illegal at multiple levels. In *United States v. Dabbs*, 134 F.3d 1071, 1074-
23 75 (11th Cir. 1998), the court found that such factoring was a bank fraud scheme to use
24 “unauthorized access device[s]” in violation of 18 U.S.C. § 1029(a). The court provided
25 this on-point summary of the business environment:

26 The nature of telemarketing companies makes it difficult for
27 those businesses to find merchant banks willing to accept their
28 credit card transactions. Because these businesses conduct
sales over the telephone, telemarketers cannot provide
merchant banks with a signed sales slip or other documented

1 customer authorization for a sale. Moreover, studies have
2 shown that telemarketing companies generate a substantially
3 greater risk of charge-backs. As a result, VISA-associated
banks prohibit telemarketers from directly depositing credit
card transactions.

4 This policy led to the development of ‘factoring.’ The
5 telemarketer uses a third-party, non-telemarketing business
6 (factoring merchant) as a conduit for depositing credit card
7 sales. The factoring merchant processes the transaction either
8 through an existing merchant account or through a separate
9 merchant account created for the telemarketing company. The
merchant bank processes the transaction as a standard credit
card sale and deposits the amount of the sale into the factoring
merchant's account. The factoring merchant then retains a fee
for the use of the account and disburses the remainder to the
telemarketer. VISA-affiliated banks include a provision in
their merchant account contracts forbidding factoring.

10
11 134 F.3d at 1074-1075.

12 Factoring merchant accounts has been held to be unlawful in multiple reported
13 decisions. *See F.T.C. v. J.K. Publications, Inc.*, 99 F. Supp. 2d 1176, 1202 (C.D. Cal.
14 2000) (“unfair business practice” in violation of the FTC Act); *United States v. Sealander*,
15 91 F.3d 160, at *5 (10th Cir. 1996) (defendants’ attempt to secure a merchant account
16 based on false statements as to the nature of the business constituted bank fraud); *United*
17 *States v. Mason*, 902 F.2d 1434, 1443 (9th Cir. 1990) (bank fraud where evidence clearly
18 showed that Wells Fargo Bank would not have opened the merchant account had it known
19 defendant would process third-party credit card slips or was laundering credit charges for
20 prostitution). Under 18 U.S.C. § 1344, it is bank fraud to knowingly execute, or attempt to
21 execute, a scheme or artifice to defraud a financial institution or use false or fraudulent
22 pretenses, representations, or promise.

23 Mr. Castine has been versatile in finding and providing access to merchant
24 accounts. From approximately June 2011 through November 2011, under the names of
25 AFB and Concord, he ran charges through the AWD and CAM Services merchant
26 accounts arranged by Ambrosia. But, in November 2011, AWD’s merchant account was
27 shut down and shortly thereafter the CAM Services account was also closed. This left
28

1 Western GPS with no way to conduct business and it actually ceased operations for several
2 weeks as it scrambled to find a vehicle to process consumer payments.

3 GPS found a temporary solution through Mr. Wayne Norris, owner of two Florida
4 entities involved in similar interest rate telemarketing ventures – W&M Enterprises
5 (“W&M”) and WM&T Enterprises (“WM&T”). Both were formed in February, 2012 and
6 promptly secured merchant accounts which Mr. Norris made available to Western GPS.
7 From approximately February, 2012 through April, 2012, Western GPS ran their charges
8 through these merchant accounts, paying a 37% fee for the privilege. These accounts,
9 however, were shut down in April, 2012.

10 For a period of two months, March-April 2012, Western GPS appears to have had
11 its own merchant account through Century Bankcard, but that account was short-lived,
12 closed by the provider on April 30, 2012.

13 On April 17, 2012, Western GPS was able to open the first of two merchant
14 accounts at Global Payments which remained active until the asset freeze. In the
15 beginning, Western GPS was the only company using these merchant accounts, but
16 Castine soon struck a deal with WM&T to allow its related rooms to run their charges
17 through the Western GPS account. Castine remitted the cash from these charges to
18 WM&T almost immediately via wire transfers, sent several times weekly, to its accounts
19 in Orlando. But, he withheld 37%, which he advised us covered the chargeback reserve,
20 the merchant’s fees, and the Western GPS fee of 8-10%. This fee thus became immediate
21 free cash flow to Western GPS. Castine also advised us that Western GPS would retain
22 any unused portion of the amount withheld to cover the reserve.

23 Not only was this arrangement unlawful merchant account factoring, it was also bad
24 business. The rooms associated with WM&T experienced high chargeback volumes which
25 placed the merchant account in jeopardy. It also put Western GPS in close association
26 with other telemarketers over whom it had no direct control and who were regarded by
27 most of the Tempe staff as particularly unscrupulous.

28 ///

1 By mid-2012, some six other ventures were running their charges through the
2 Western GPS merchant accounts with roughly the same 37% arrangement. In most cases,
3 the Tempe office manager would make weekly bank deposits into their accounts to cover
4 their charges, less 37%.

5 For Western GPS to have a compliant future, these variants of merchant account
6 factoring would have to be eliminated. My initial investigation indicates that this would be
7 terminal to the business plan as the revenue from this factoring has kept the business
8 afloat. As a practical matter, Western GPS will also no longer have any capacity to secure
9 a merchant account at any level even if it were to zealously limit its use to its own
10 operations.

11 **E. Financial**

12 Western GPS does not utilize any accounting software for the maintenance of
13 financial records, but deploys an informal checkbook system which permits only a cursory
14 cash in/cash out analysis based on checking account activity. Many transactions are also
15 loosely categorized which makes precise allocation to traditional profit and loss categories
16 difficult. As such, any effort at this early stage to reconstruct and/or summarize the
17 financial results must be qualified as preliminary only and subject to further review.

18 The financial summary prepared by the receivership's forensic accountant is at
19 Appendix, Exhibit 11.

21 ///

22 ///

23 ///

24 ///

25 ///

26 ///

27 ///

28 ///

1 Based on our review of the available records, we can estimate that from February 1,
2 2012 to September 31, 2012 revenues flowing into Western GPS totaled \$3,963,607,
3 sourced as follows:

4 Direct Western GPS Sales: ¹	\$965,811
5 Other Processing Revenues: ²	\$2,837,855
6 Other Cash Receipts:	\$159,942
Total Cash Receipts:	\$3,963,608

7 Against those revenues, we estimate expenses of \$3,887,098 broken down as
8 follows:

9 Payments to Third Parties from Processing Receipts: ³	\$1,804,766
10 Payments for Robocalling Services:	\$177,626
11 Charges made by Credit Card Servicing Agencies: ⁴	\$660,330
Bounced check fees and other bank service fees:	\$77,946
12 Chargebacks charged directly from company accounts:	\$361,157
Payroll and burden:	\$425,919
13 Other administrative expenses:	\$208,638
Owner use of cash proceeds:	\$170,716
Total Expenses:	\$3,887,098

14 Notes:

- 15 1. Represents gross revenues from actual sales made by the Tempe call room.
- 16 2. Represents total gross revenue for charges processed through the Western GPS
17 merchant account by other call rooms using the Western GPS merchant account.
- 18 3. Represents payments made from Western GPS to the other call room operators
19 which processed charges through the Western GPS merchant account. This was
20 generally calculated as gross sales less 37%. Most of these payments (\$1.3
21 million) were made to WM&T Enterprises in Florida, which we believe either
22 owned and/or operated three rooms in Florida.
- 23 4. Represents fees charged by the merchant account, including reserve funds
24 withheld to cover future chargebacks.

25 This was not a profitable business. Absent the free cash flow provided by the other
26 telemarketers who were running their charges through the Western GPS account, it would
27 run at large monthly negatives.

V.

Conclusion

Western GPS, the only Receivership Defendant currently in operation, is an unlawful business. The consumer calls coming into its Tempe call room are driven there by illegal robocalls. Its processing of credit card charges has, and does, include multiple variants of illegal merchant account factoring. Moreover, given that the business of the call room is not now profitable, I do not, at this juncture, see a viable means by which this business could proceed as a lawful and profitable venture in the context of this receivership.
